

Launch Your Own AI Factory – Owned and Operated By You

Deploy enterprise-grade private AI—quickly, securely, and fully within your infrastructure

Solution Overview

The AI Factory is a turnkey solution powered by the QXLI AI Engine, enabling organizations to rapidly deploy enterprise-grade private AI entirely within their own environment—on-premises or in the cloud. Unlike public AI tools and SaaS platforms that can compromise data confidentiality, the AI Factory keeps all data and processing securely within organizational boundaries while delivering powerful, production-ready AI capabilities.

The solution integrates leading AI frameworks, multiple optimized Large Language Models (LLMs), and advanced agent tools into a single, unified platform. It comes preloaded with essential AI agents and provides the tools to customize, build, or discover and deploy additional agents as organizational needs evolve.

With a 2-week deployment plan, the AI Factory accelerates time-to-value while minimizing complexity and cost. From infrastructure setup to agent deployment and integration, everything is handled by our team—allowing your organization to start using AI securely and effectively in days, not months.

The result is a future-ready AI engine—owned by you, operated by you, and fully aligned with your business goals and regulatory requirements.

Key Benefits

Rapid Deployment: Up and running in weeks, not months

Cost Effective: Pre-configured and ready-to-deploy; no specialized AI team required

Full Control: Your data never leaves your environment — critical for compliance and IP protection

Agent-Enabled Automation: Launch advanced AI agents for real-time operations

Multi-Model Capabilities: Run, fine-tune, and switch between multiple LLMs for varied tasks and domains

Scalable Architecture: Easily expand to include new use cases or integrate with existing systems

What's Included

QXLI Core Engine – Integrates leading AI frameworks, agent tools, and LLMs out-of-the-box

AI Agent Suite – Essential / Domain-specific agents for knowledge retrieval, automation, tracking, etc.

Security & Governance – Role-based control. Integration with monitoring tools

Conversational Assistant – Embedded chat/voice UI for user-friendly interaction

Deployment Support – End-to-end setup by our engineering team

[Optional] Services – AI Ops, fine-tuning, and lifecycle management

Ideal For

Organizations with strict data residency and regulatory needs

Departments with restrictions on using centralized or SaaS-based AI solutions

Teams requiring secure, localized AI deployments due to compliance or operational constraints

Enterprises looking to embed AI into operations without building large internal teams

AI Factory Tiers

Tiers	Includes
Base	QXLI AI Engine + Default AI Agents + Secure Setup
Extended	Agent Customization, Model Tuning, Integration
Enterprise	Multi-site Deployments, Support

Ready to unlock your own AI Factory?

Set up and harness enterprise-grade intelligence—on-premises or in the cloud—in just days, not months. Gain powerful, secure, and compliant AI capabilities tailored to your environment—without the need for a large internal AI team or complex integrations.

Take control of your AI future. Get in touch today!
