

QXLI Starter Solution

Enterprise Knowledge AI

Your company already has the knowledge.
QXLI turns it into AI.

QXLI Enterprise Knowledge AI creates a private AI assistant that searches, analyses, and reasons across your organisation's documents and knowledge systems. Employees ask questions in natural language and instantly retrieve answers — from internal and external sources alike.

No SaaS AI

No data leaving your environment

Secure, enterprise-grade Private AI

The Challenge

The hidden cost of organisational knowledge

In most companies, critical knowledge is fragmented across shared drives, legacy document repositories, and internal databases.

Employees spend up to 30% of their time searching for information, recreating knowledge that already exists, or using unofficial AI tools to analyse internal documents.

The result is lost productivity, operational friction, and compliance risks.

The Solution

A private AI layer for your organisation

QXLI creates a secure AI layer across your organisation's knowledge systems, allowing employees to interact with company knowledge using natural language.

- Ask questions about policies and procedures
- Search across internal documents instantly
- Upload contracts and reports for AI analysis
- Analyse external information from the internet
- Access company knowledge in seconds, not hours

How It Works

Three steps to organisational intelligence

01.

Connect knowledge sources

QXLI Enterprise Knowledge AI connects to document repositories, shared drives, and internal databases. Documents are indexed securely to create a private knowledge layer.

02.

Private AI processing

When employees ask a question, the platform retrieves relevant knowledge from indexed sources, analyses it using private language models, and generates an answer with source citations.

03.

Natural language interaction

Employees ask questions, analyse documents, retrieve policies, and search internal knowledge through a simple interface — with instant access to organisational intelligence.

Use Cases

Five ways to deliver immediate ROI

Instant Knowledge Retrieval

"What is our travel reimbursement policy?" — answered instantly, with source citations.

Upload & Analyze Documents

Summarise contracts, extract payment terms, identify risks — in seconds.

Enterprise Document Search

"Show the latest vendor contract template." No more navigating folders.

External Intelligence Retrieval

Retrieve and analyse external information from the internet to complement internal knowledge.

Employee Onboarding Assistant

"How do I submit expense claims?" Reduces HR and IT support workload.

Outcomes

What organisations achieve

- ✓ Significant reduction in time spent searching for information
- ✓ Faster document analysis and contract review
- ✓ Improved compliance and policy adherence
- ✓ Faster onboarding of new employees
- ✓ Better utilisation of internal knowledge
- ✓ Reduced support requests to HR, IT, and operations

Your organisation's knowledge becomes instantly accessible intelligence.

Timeline

Deployment in 3–4 weeks

Week 1

Deploy the platform

Week 2

Connect document sources

Week 3

AI tuning and indexing

Week 4

Launch internal AI assistant

What comes next?

Proposal Factory

Finance and Risk AI

Compliance Monitoring AI

Operations Intelligence AI

Ready to unlock your organisation's knowledge?

Deploy enterprise AI securely — without exposing sensitive data to external services. No unpredictable per-token costs. No vendor lock-in. Full control.
