

QXLI Starter Solution

Enterprise *Knowledge AI*

Your company already has the knowledge.
QXLI turns it into AI.

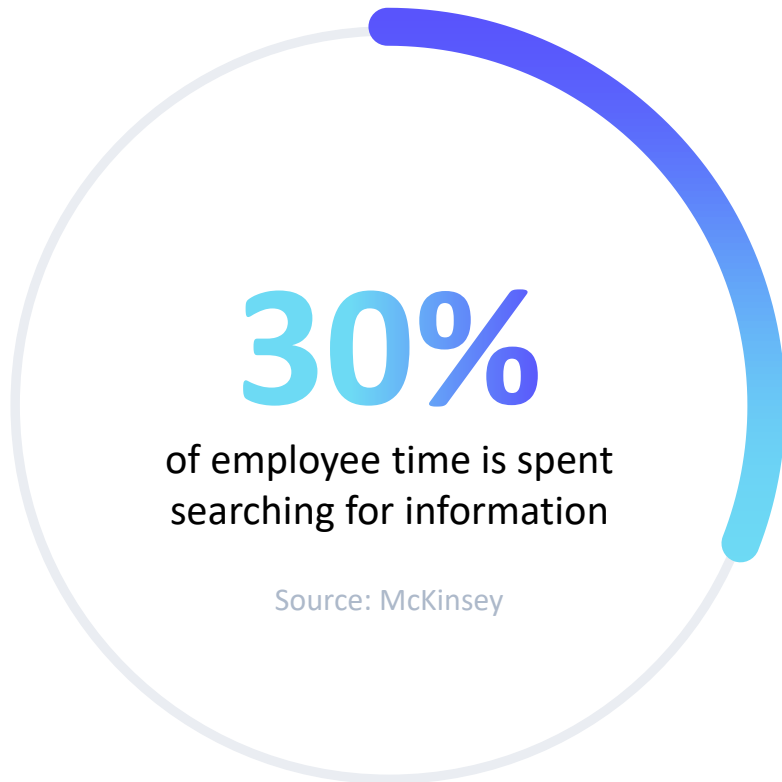

A private AI assistant that searches, analyzes, and reasons across your organization's documents — securely, on your infrastructure.

 0% Data Egress	 3-4 Weeks To Deploy	 100% Private
--	---	--

The Challenge

The Hidden Cost of Organizational Knowledge

Fragmented Knowledge

Critical knowledge scattered across shared drives, legacy repositories, and internal databases.

Compliance Risk

Employees using unofficial AI tools to analyze internal documents — exposing sensitive data.

Duplicated Effort

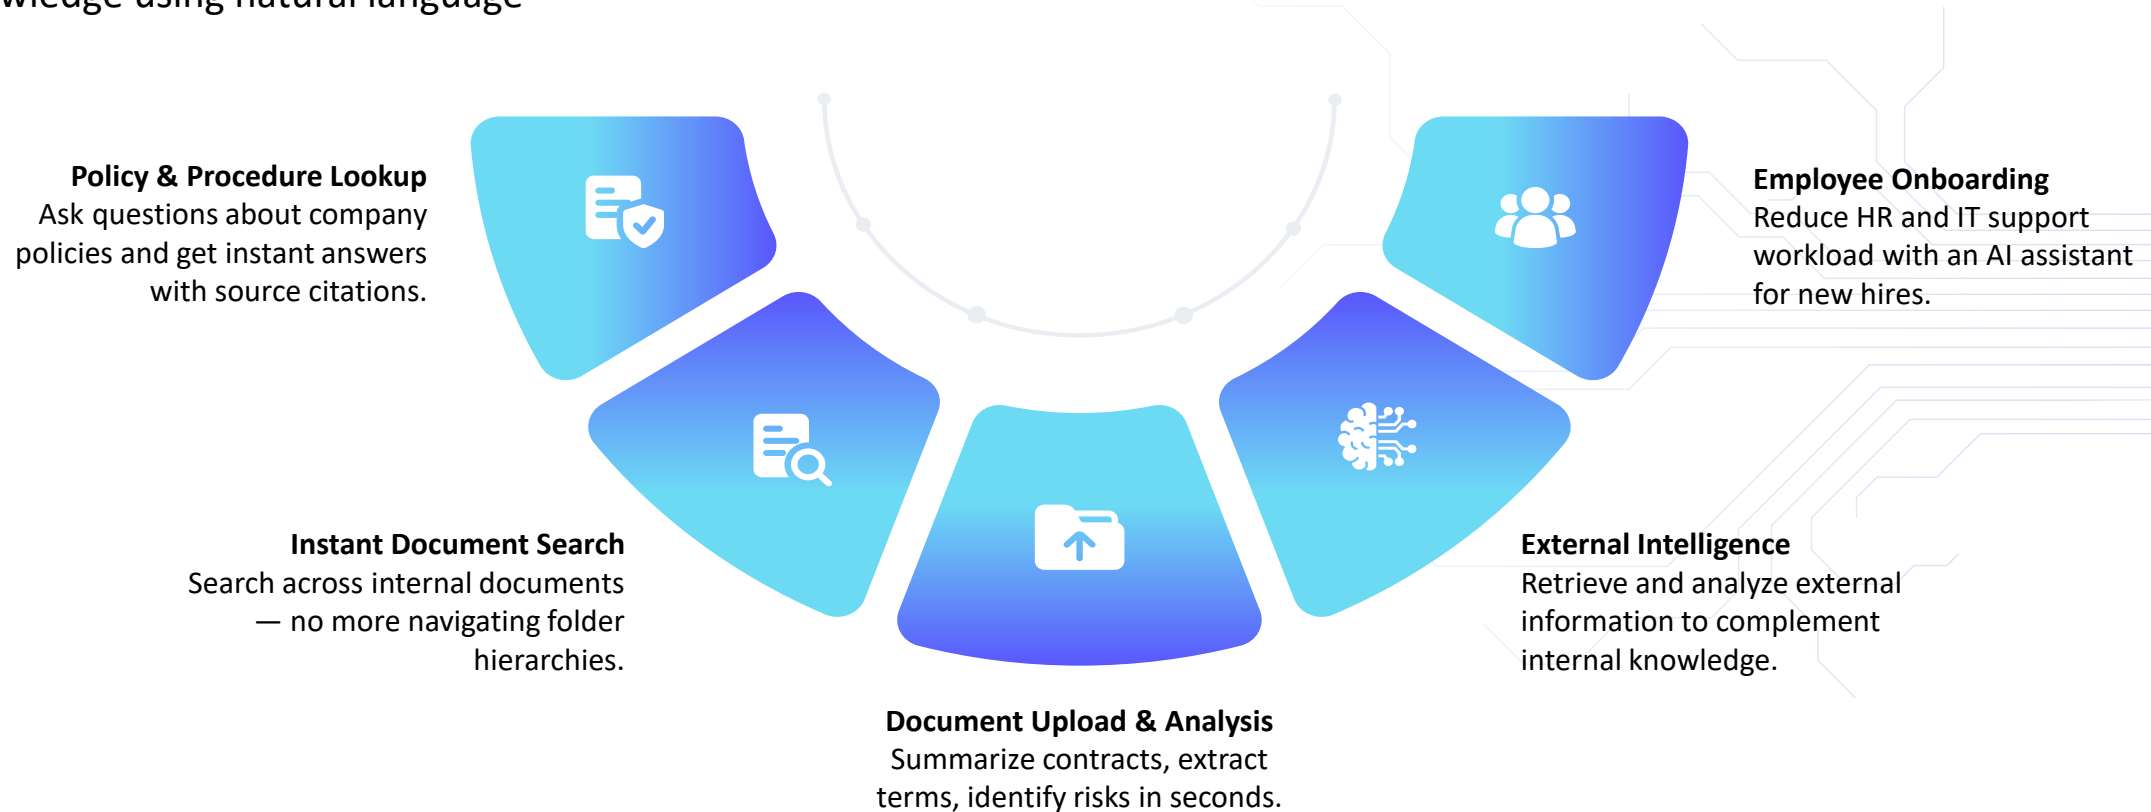

Teams recreating knowledge that already exists, wasting hours every week.

Result: Lost productivity, operational friction, and compliance risks.

The Solution

A Private AI Layer for Your Organization

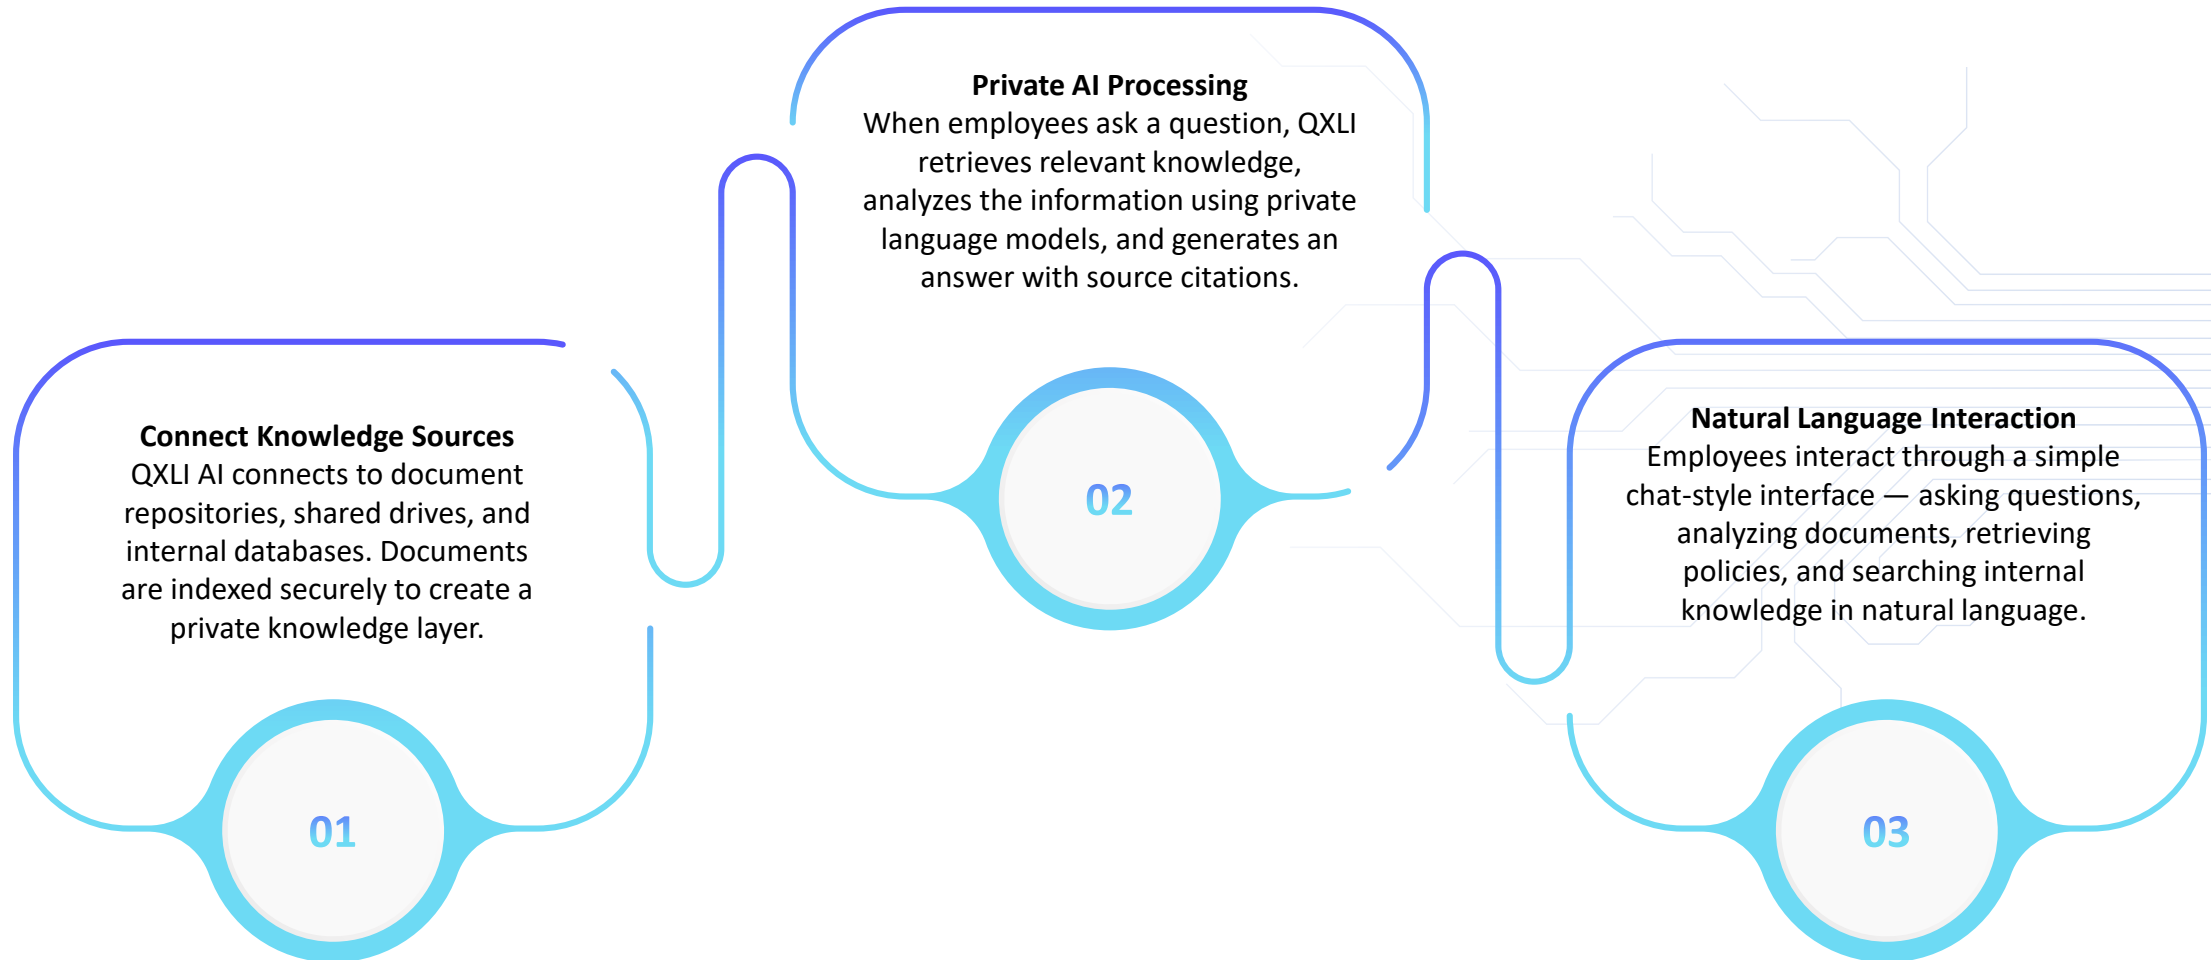

QXLI creates a secure AI layer across your organization's knowledge systems, allowing employees to interact with company knowledge using natural language

Unlike SaaS AI copilots, QXLI does NOT send your data to external AI providers. All processing occurs within your infrastructure

How It Works

Three Steps to Organizational Intelligence

Use Cases

Five Ways to Deliver Immediate ROI

Instant Knowledge Retrieval

"What is our travel reimbursement policy?"

Answered instantly, with source citations. No searching through folders.

Upload & Analyze Documents

Contracts, reports, vendor agreements

Summarize, extract payment terms, identify risks — in seconds.

Enterprise Document Search

"Show the latest vendor contract template."

No more navigating folder hierarchies or guessing filenames.

External Intelligence Retrieval

Market data, industry reports

Retrieve and analyze external information to complement internal knowledge.

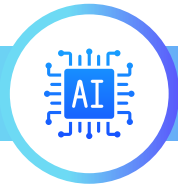

Employee Onboarding Assistant

"How do I submit expense claims?"

Reduces HR and IT support workload dramatically.

Why It Matters

Why Private AI Matters

Why Organizations Can't Use SaaS AI

- ✗ Data privacy concerns — sensitive data leaves your environment
- ✗ Regulatory requirements — PDPA, HIPAA, MAS, or sector-specific rules
- ✗ Intellectual property protection — proprietary knowledge at risk
- ✗ Unpredictable per-token costs that scale with usage
- ✗ Vendor lock-in to proprietary services and APIs

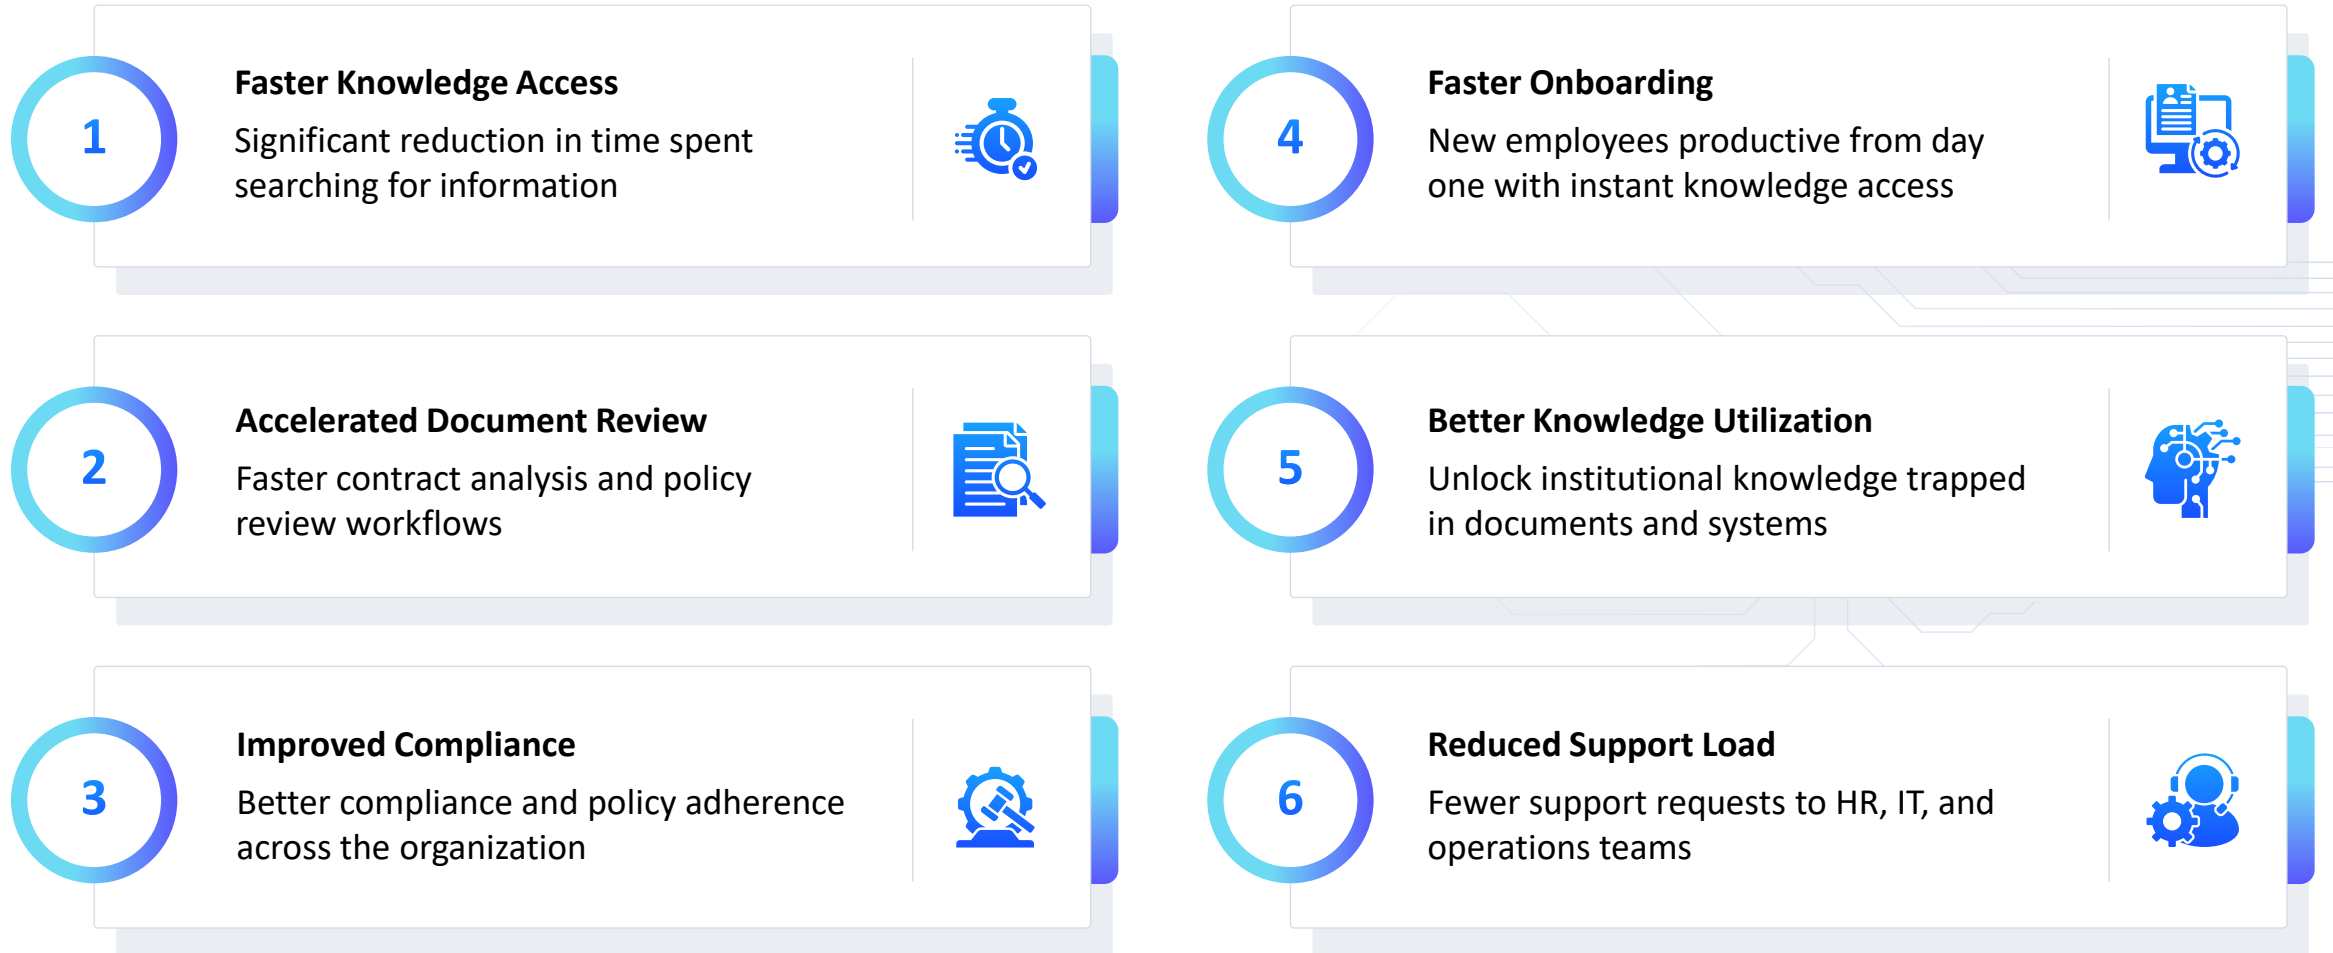

The QXLI AI Advantage

- ✓ 0% Data Egress — all AI processing inside your environment
- ✓ Open standards — zero vendor lock-in, full extensibility
- ✓ Fixed infrastructure costs — predictable, no per-token billing
- ✓ Access to agent source code — no black boxes
- ✓ Air-gap / on-prem / private cloud deployment

Your data — and all AI processing — remains inside your infrastructure

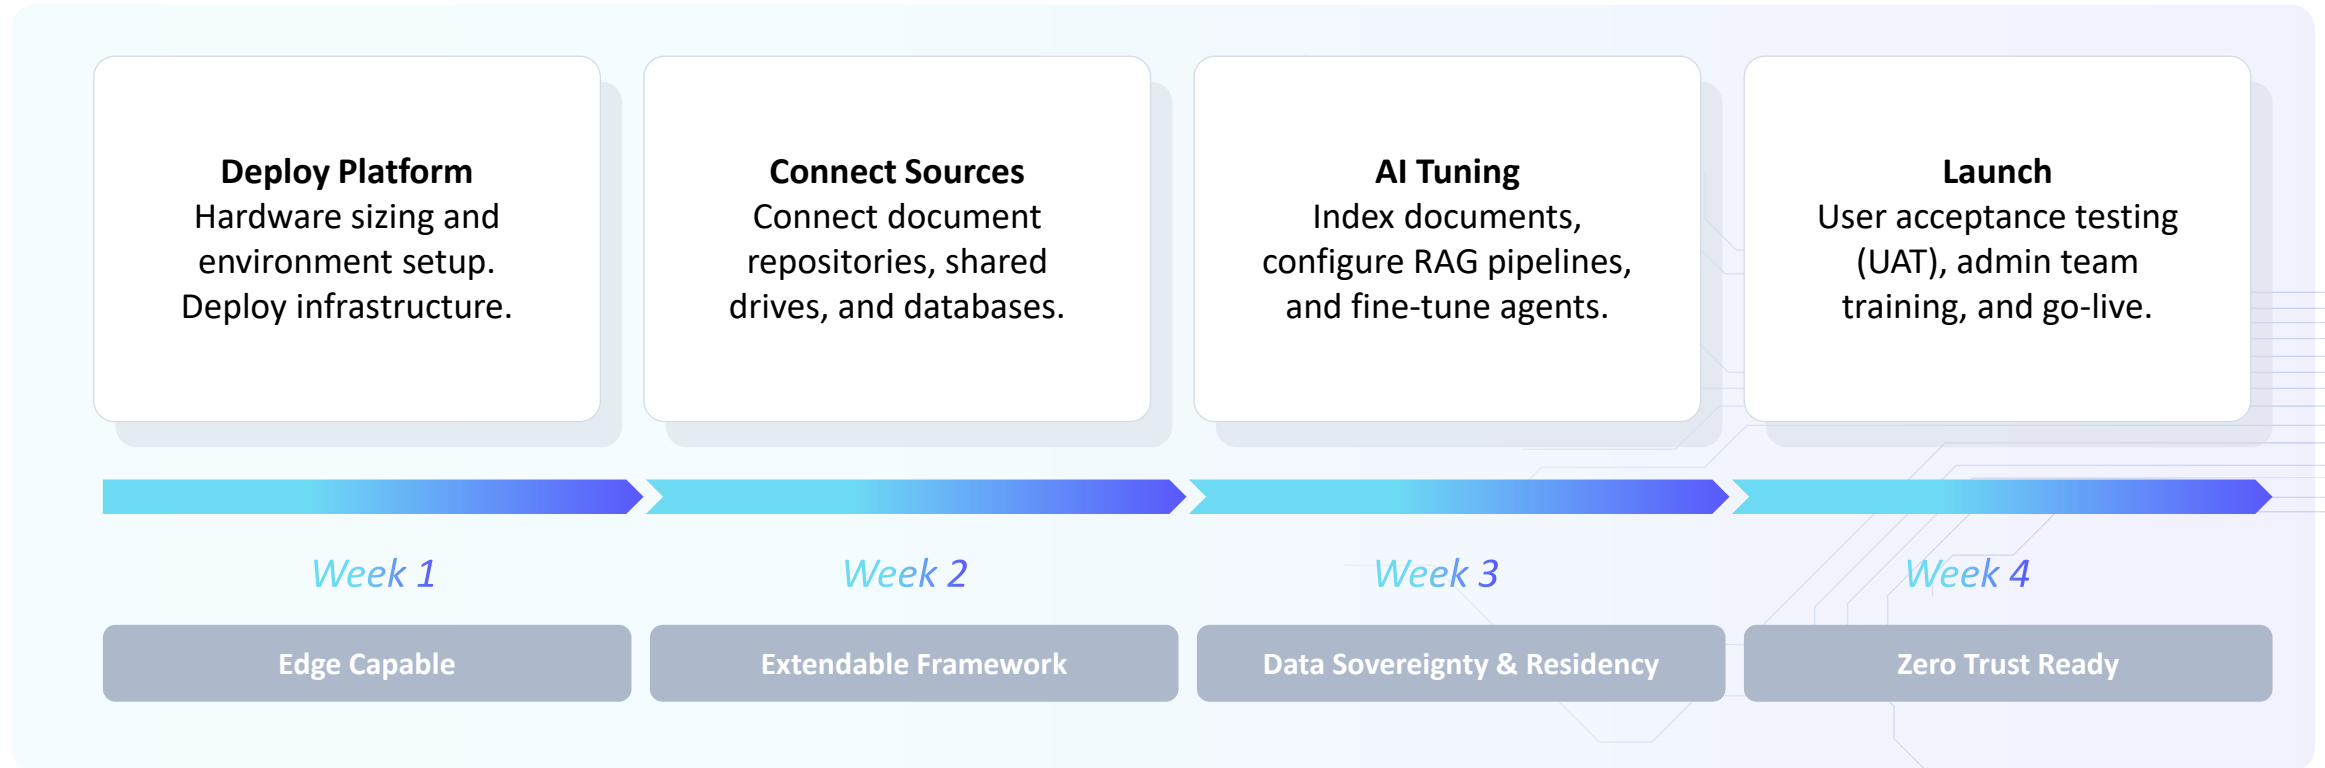

Outcomes

What Organizations Achieve

Timeline

Production-Ready in 4 Weeks

Expands into broader enterprise AI use cases

Proposal Factory · Operations Intelligence · Finance & Risk AI · Customer / GTM Intelligence

QXLI Enterprise Knowledge AI

Secure. Intelligent. Yours.

Private Enterprise AI Infrastructure
