

AI-in-a-Box

Empowering rapid deployment of private AI; ensuring security, compliance, and scalability

Private, On-premises or Cloud Deployments

Cost Efficient and Customizable

Secure and Compliant

Despite its transformative potential, organizations encounter numerous challenges in effectively deploying and harnessing **Artificial Intelligence**

Key Challenges include:

Data Privacy and Compliance

Organizations face increasing concerns over sensitive data exposure when using public AI solutions

Complex and Slow Deployment

AI systems often require specialized expertise, tools, integration, and can involve rather long deployment cycles

High Costs to Deploy and Maintain

Ongoing expenses for AI solutions can rapidly escalate, particularly for organizations with large-scale data needs

Latency and Speed

Public cloud-hosted AI solutions can often suffer latency issues, particularly in remote or critical environments

QXLI is an out-of-the-box AI solution that is designed for privacy, security, and rapid adoption and can be fully deployed on-premises or in Cloud environments

Features

● **Enhanced Security**

Mitigate risks by keeping all data processing within enterprise boundaries

● **Fast Deployment**

The pre-configured AI-in-a-Box solution dramatically reduces setup time

● **Customize for Use Cases**

Can be preloaded with specific AI models, fine-tuned, and extended with custom agents

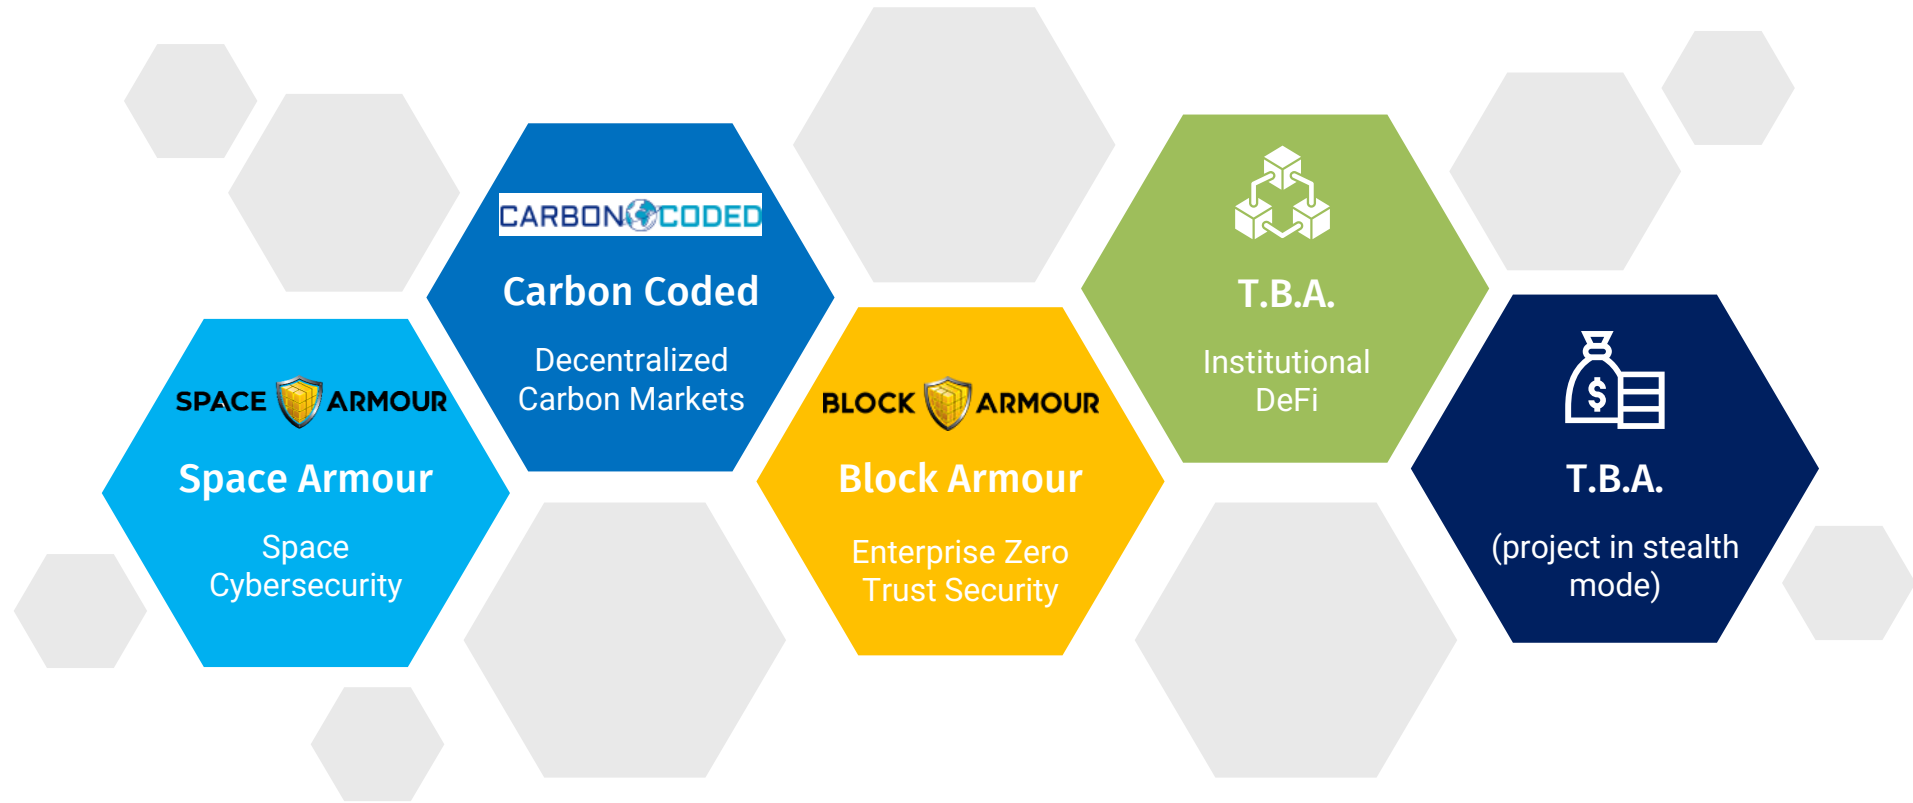

● **Cost Efficiency**

Lower total cost of ownership without the need for select specialized tools and skills

● **Edge Capabilities**

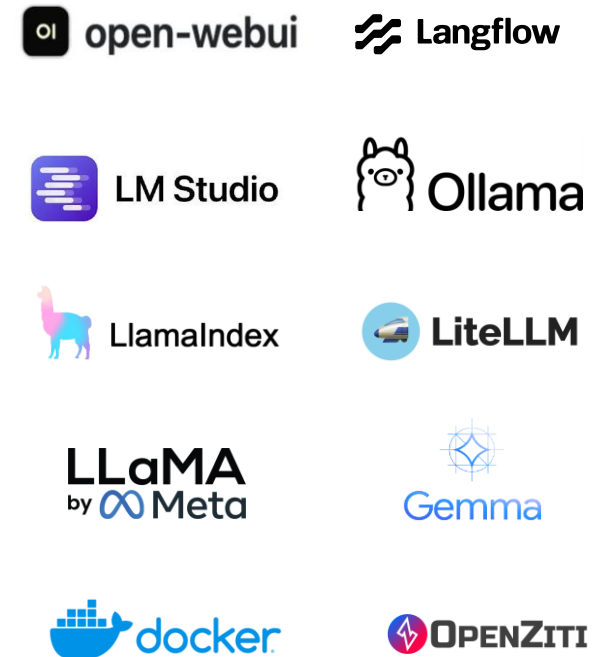

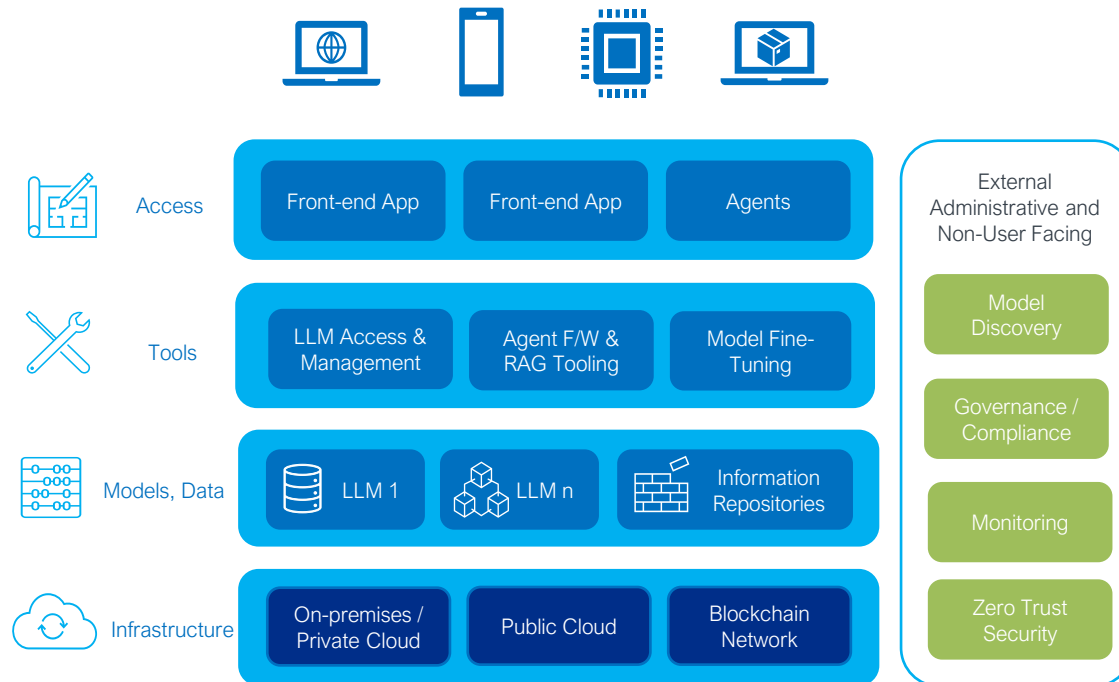

Reduce latency issues, especially in remote or critical environments

Originally designed and developed for our own projects, we now offer the integrated pre-configured AI solution to organizations with similar requirements

QXLI integrates leading AI frameworks, models, and tools into a single out-of-the-box solution, enabling rapid, secure, cost-effective deployment and utilization of AI

The Tech Stack

QXLI's emphasis on rapid deployment, privacy, & security makes it ideal for organizations that require AI operations to be conducted within a controlled and protected environment

Select potential use cases

**Finance/DeFi:
Wealth management**

Predictive analytics and portfolio management

**Manufacturing & Utilities:
Predictive Maintenance**

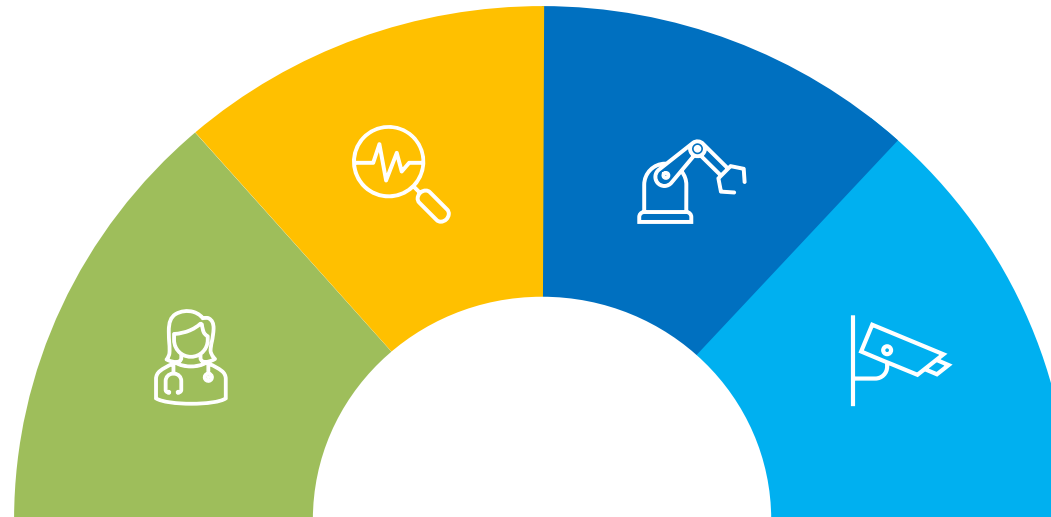

Monitor equipment and predict failures to minimize downtime

**Healthcare: Secure Medical
Diagnostics**

Patient data analysis while ensuring compliance with regulations like HIPAA.

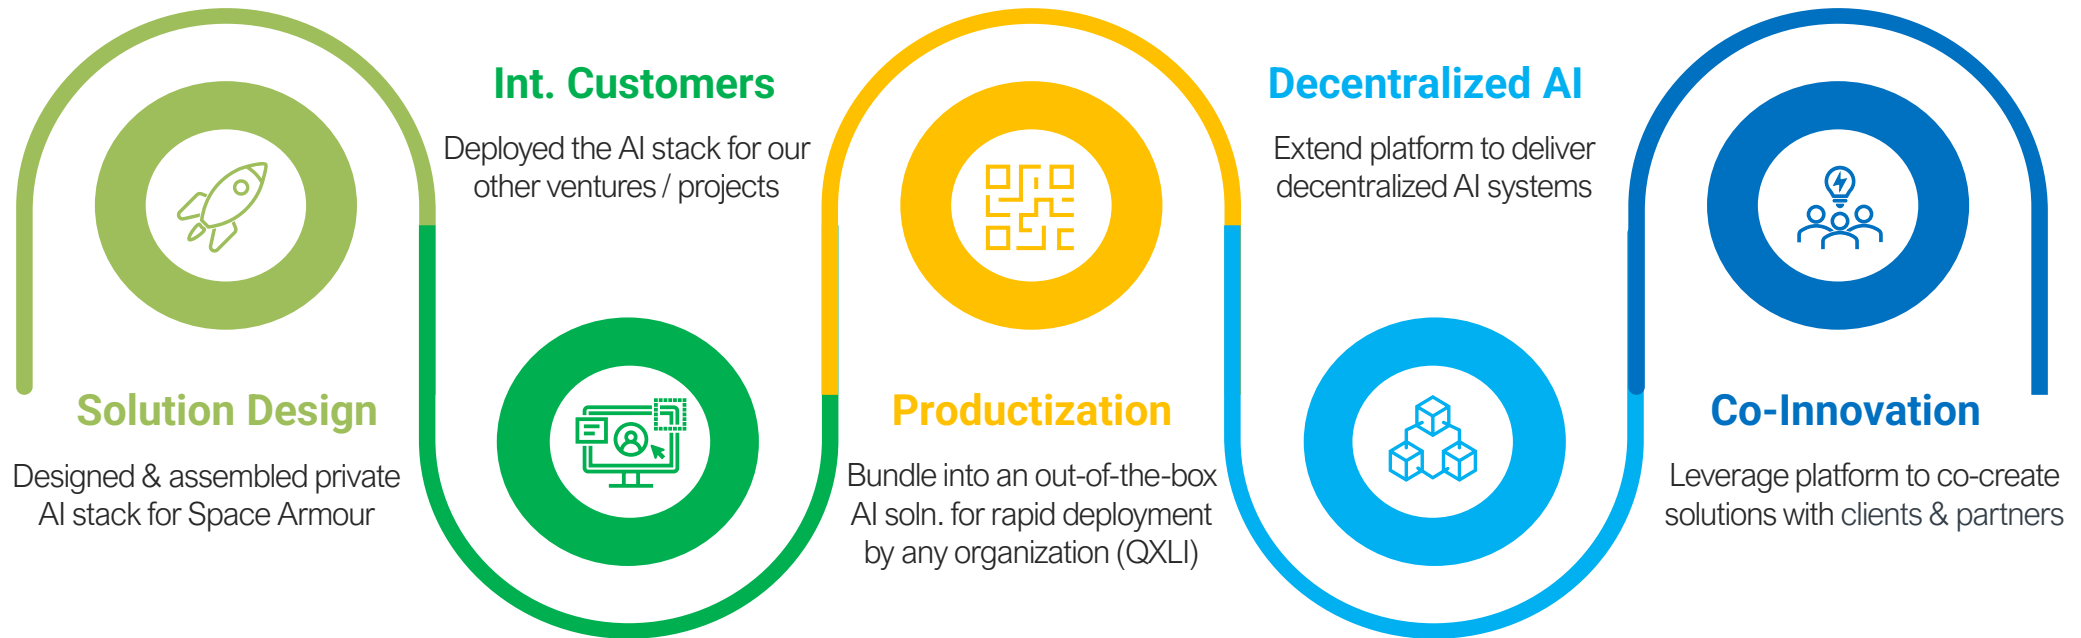

**Government: Public
Safety Monitoring**

Analyze surveillance and intelligence data for security operations

Going ahead, our technology roadmap includes developing and utilizing decentralized AI architectures and co-creating industry-specific solutions with clients and partners

The Tech Roadmap

Open Connected eXtensible
Intelligence Nodes (OCXIN)

Generative Reasoning & Agentic
Extended Intelligence (GRAXI)

By blending advanced AI capabilities with unparalleled privacy and security, QXLI empowers organizations to innovate fearlessly while safeguarding sensitive data

Get the private AI advantage today!

Private and Secure

Keeps data processing within organizational boundaries

Customizable Models

Pre-trained and fine-tuned AI models are tailored for use cases

Cost efficient

Lower TCO with reduced need for specialized tools and skills

Rapid Deployment

Plug-n-play model minimizes setup time and technical issues

Join us in the democratization and transformation of AI adoption, as we enable organizations worldwide to leverage advanced AI capabilities securely and compliantly
