

## Unified Enterprise AI Engine

Empowering organizations with next-generation AI solutions—  
secure, compliant, and fully in control

Private, On-premises or Cloud Deployments

Simple and Cost Efficient

Secure and Compliant

\* Quick eXtensible Layered Intelligence

# Despite its transformative potential, organizations encounter numerous challenges in effectively deploying and utilizing Artificial Intelligence

*Key challenges include:*

## Data Privacy and Compliance

Organizations face increasing concerns over sensitive data exposure when using public AI solutions

## Complex and Slow Deployment

AI systems often require specialized expertise, tools, integration, and can involve rather long deployment cycles

## High Costs to Deploy and Maintain

Ongoing expenses for AI solutions can rapidly escalate, particularly for organizations with multi-agent systems

## Third-Party Dependency Risks

Relying on third-party AI SaaS can affect business continuity in case of service outages or discontinuation

QXLI unifies leading AI frameworks, optimized LLMs, and agent tools into a single out-of-the-box solution, enabling organizations to deploy and leverage AI in a secure and cost-effective way

*The Benefits*

**RAG and Agentic AI**

Employ RAG & customized AI agents integrated with enterprise apps

**Cost efficient**

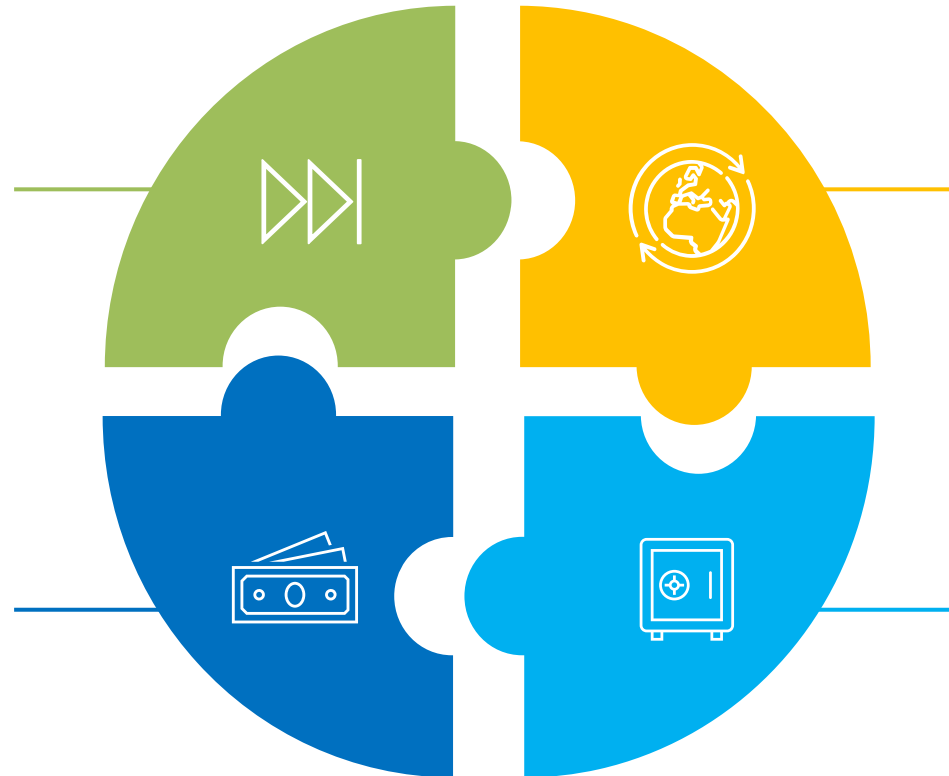

Lower TCO with reduced need for specialized tools and skills

**Optimized Multi-LLM**

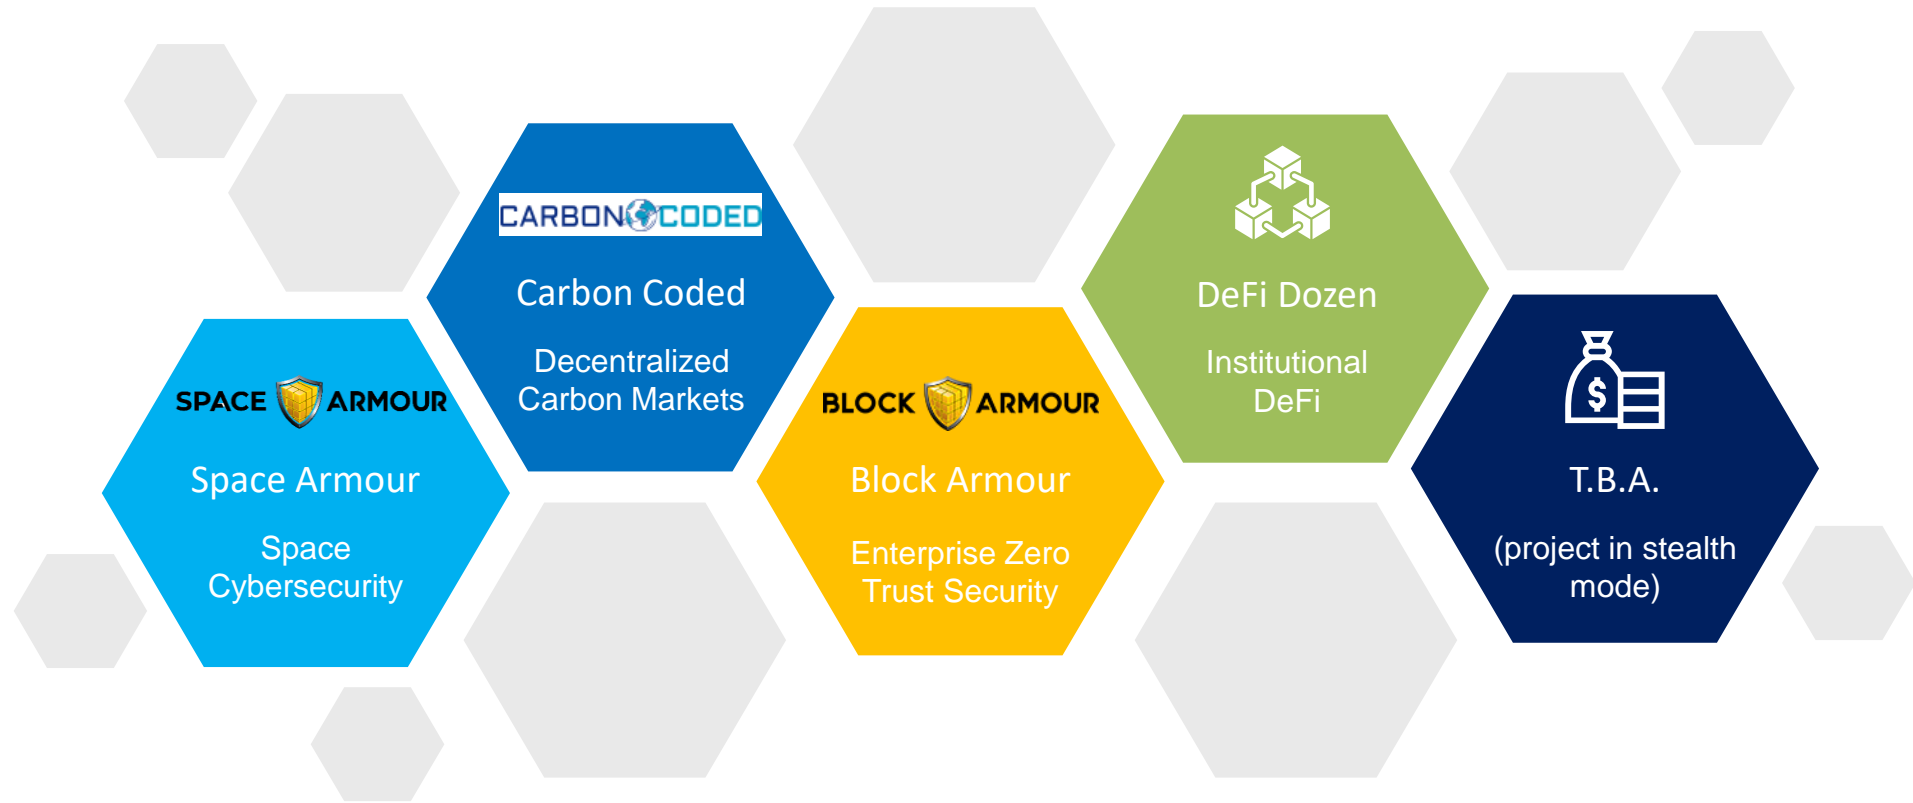

Utilize multiple optimized and fine-tuned AI models simultaneously

**Private and Secure**

Keep all data and processing within organizational boundaries

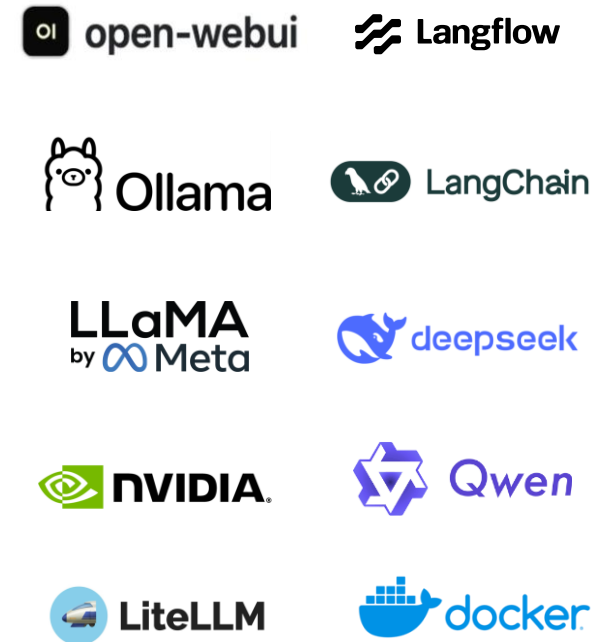

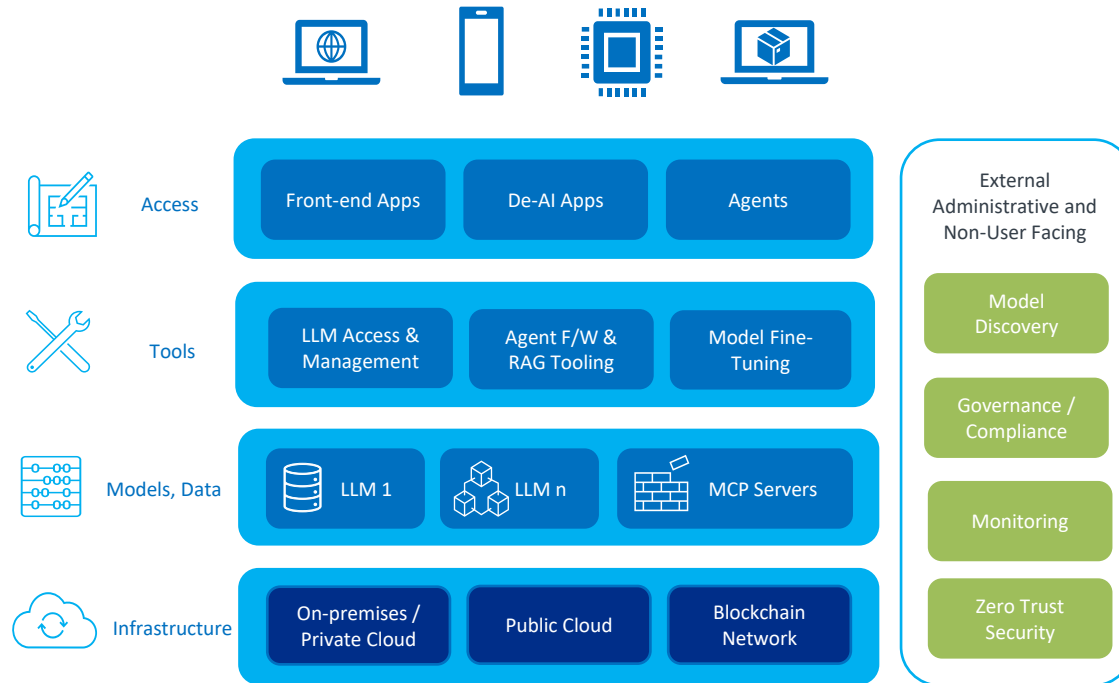

Originally designed and assembled for our own projects, we now offer the integrated pre-configured AI solution to organizations with similar requirements

# QXLI integrates leading AI frameworks, optimized LLMs, and advanced agent tools into a ready-to-use solution that can be fully deployed on-premises or in the Cloud

## The Unified Tech Stack

The solution enables organizations to simultaneously leverage multiple leading and fine-tuned LLMs while deploying specialized AI agents that seamlessly integrate with existing applications

### Key Features

#### Agent Tooling

Build, trial, and launch specialized AI agents

#### Adaptive Workflows

Integrate agents with various existing applications

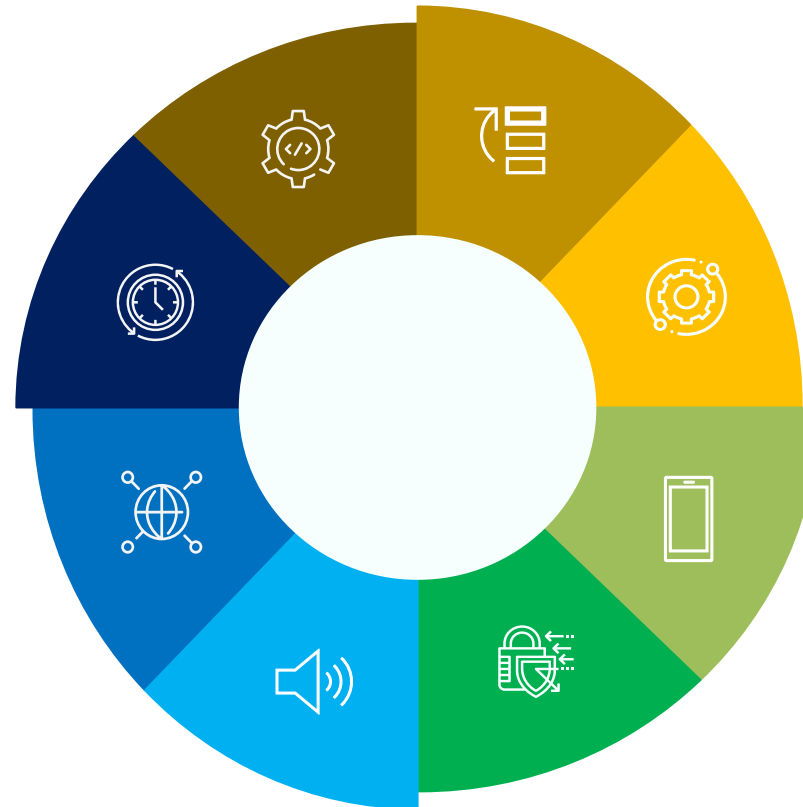

#### Smart RAG

Include web search and chat with your document library

#### Conversational Assistant

Use voice commands to interact with AI chat agents

#### Multi-Model

Simultaneously use multiple LLMs, harnessing their unique strengths for optimal responses

#### Fine-tune Models

Fine tune foundational models for specific use cases

#### Seamless Experience

Enabled across desktop PC, laptop, and mobile devices

#### Secure Access

Provide granular permissions and grant role-based access

QXLI's emphasis on privacy and security makes it ideal for organizations that require AI operations to be conducted within a controlled and protected environment

*Select potential use cases*

### Healthcare: Secure Medical Diagnostics

Patient data analysis while ensuring compliance with regulations like HIPAA.

### Finance/DeFi: Wealth Management

Predictive analytics and portfolio management

### Manufacturing & Utilities: Operational Control Towers

Effective monitoring and analysis, enabling optimized decision making and risk management

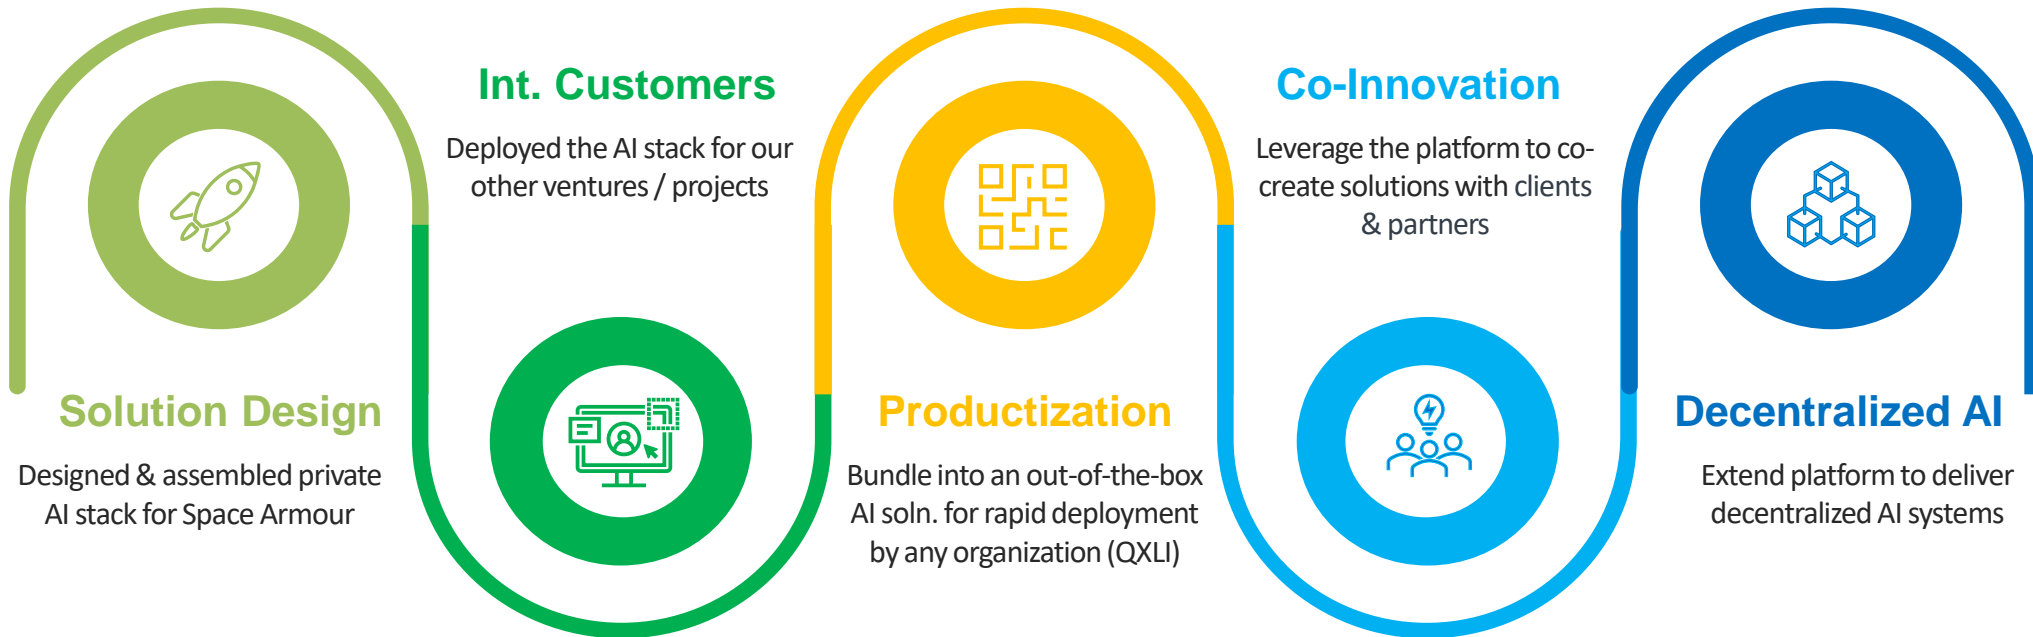

### Government: Public Safety Monitoring

Analyze surveillance and intelligence data for security operations

Moving forward, our technology roadmap focuses on co-creating industry-specific solutions with clients and partners while also exploring and leveraging decentralized AI architectures

*The Tech Roadmap*

Open Connected eXtensible  
Intelligence Nodes (OCXIN)

By blending advanced AI capabilities with unparalleled privacy and security, QXLI empowers organizations to innovate fearlessly while safeguarding sensitive data

*Get the private AI advantage today!*

### ● Rapid Deployment

Reduce setup time with an integrated and pre-configured out-of-the-box solution

### ● Enhanced Security

Mitigate risks by keeping all data processing within enterprise boundaries

### ● Optimized Intelligence

Utilize multiple AI models, fine-tuned, and extended with specialized agents

### ● Cost Efficiency

Lower total cost of ownership without the need for select specialized tools and skills

### ● Business Continuity

Minimize dependency on third-party AI systems; reduce risk and ensure continuity

Join us in shaping the next generation of AI solutions—empowering organizations worldwide to harness advanced AI capabilities securely, compliantly, and with confidence
